

# Game Design Document – Checkpoint 1.2

## Ubuntu City

### 1. Game Overview

Title: Ubuntu City

Genre: Action Platformer / Boss Rush Shooter

Target Audience: Teenagers and young adults (13–25)

Platform: PC (Unity 2D)

### 2. Game Objective

The objective of Ubuntu City is for the player (Luca) to defeat enemies and bosses using ranged combat to restore the ruined city.

- Progress through levels
- Each level ends with a boss or puzzle stage
- Win by defeating CityJan
- Lose if health reaches zero

### Progression System

- Increasing difficulty
- Bosses with multiple phases
- Shop system for guns
- Puzzle stages

### 3. MDA Framework

#### 3.1 Mechanics

- Movement: left/right, jump, dash
- Ranged combat with 2 guns equipped
- Weapon switching
- Different gun types (rapid, heavy, spread)
- Health system
- Boss phases
- Items and keys
- Enemy AI (close and long range)
- Unity physics (Rigidbody2D and colliders)

### 3.2 Dynamics

- Strategic weapon switching
- Dodging while shooting
- Pattern recognition in boss fights
- Puzzle-solving for variety
- Alternating combat and slower gameplay

### 3.3 Aesthetics

- Challenge and difficulty
- Excitement from fast combat
- Immersion in ruined city
- Curiosity through exploration
- Satisfaction from defeating bosses

## 4. Formal Elements

- Single-player game
- Objective: defeat enemies and bosses
- Rules: must complete stages to progress
- Procedures: move, shoot, dodge, progress
- Resources: health, guns, currency
- 2D boundaries
- Win/lose conditions

## 5. Dramatic Elements

Luca lives in a ruined city controlled by CityJan. The player progresses through levels, learning more about the story and ultimately confronting the final boss.

## 6. Dynamic Elements

- Different playstyles
- Evolving boss fights
- Emergent gameplay strategies
- Trial-and-error learning

## 7. Elemental Tetrad

- Mechanics: shooting and movement
- Story: Luca vs Shrijan
- Aesthetics: dark ruined world
- Technology: Unity engine

## 8. Development Plan

- Weeks 1–2: design
- Week 3: core mechanics
- Weeks 4–6: enemies and levels
- Week 7: boss system
- Week 8: testing and polish
